TITLE:

V. G. Sosyants

PERIODICAL: Elektrichestvo, 1959, Nr 5, p 92 (USSR)

ABSTRACT:

A short curriculum vitae on the occasion of his 70th birthday.
 Born on November 27, 1888 in Tiflis. Entered the Moskovskiy
 tramvay (Moscow Streetcar Service) in 1908, studied at the
 same time and finished his studies at the Polytechnic Institute
 in 1916. He worked in the Moscow Streetcar Service until 1930
 where he finally became chief engineer. From 1931-37 he work-
 ed in the system of the Narodnyy komissariat kommunal'nogo
 khozyaystva RSFSR (People's Commissariat for Municipal Economy
 of the RSFSR) and in the Vsesoyuznyy sovet kommunal'nogo
 khozyaystva pri TsIK SSSR (All-Union Soviet of the Municipal
 Economy at the TsIK of the USSR). From 1937 he has been con-
 ducting the Sector of Municipal Transport at the Akademiya
 kommunal'nogo khozyaystva im. Pamfilova (Academy of Municipal
 Economy imeni Pamfilov). Besides, he is working as a pedagogue.

He started his activity as a pedagogue in 1929 at the Institut narodnogo khozyaystva im. Plekhanova (Institute of Political Economy imeni Plekhanov) where he organized and gave lectures on municipal electric transportation. Later on he also worked at the Moskovskiy energeticheskiy institut (Moscow Power Engineering Institute) and other institutes. He published a number of scientific papers, text books, and manuals. In 1923 he organized the 1st All-Russian Streetcar Conference. He was a member of the Presidium of the Postoyannoye byuro vsesoyuznykh tramvaynykh s"yezdov (Permanent Office of the All-Union Streetcar Congresses), of the Vsesoyuznoye nauchnoye inzhenerno-tekhnicheskoye obshchestvo gorodskogo transporta (All-Union Scientific Technical Society of Municipal Transportation). Since 1954 he has been Deputy President of the Central Executive Committee of the Nauchno-tekhnicheskoye obshchestvo sanitarnoy tekhniki i gorodskogo khozyaystva (Scientific-technical Society of Sanitary Engineering and Municipal Economy). At the same time, he is Deputy President of the Section of Transportation of the Moskovskoye gorodskoye otdeleniye Vsesoyuznogo obshchestva po rasprostraneniyu politicheskikh i nauchnykh znaniy (Moscow Municipal Department of the All-Union Society for the Propagation of Political and Scientific Education), as well as a member of the Commission for the Reorganization of Municipal Trans-

TITLE: On the accuracy of geodetic operations in gravimetric surveying

CITED SOURCE: Tr. Novosib. in-ta inzh. goed., aerofotos"emki i kartogr. v. 17, no. 2, 1964, 103-111

TOPIC TAGS: gravimetric surveying, geodetic operations, gravity anomaly

TRANSLATION: The author examines the influence of errors in the coordinates and allowances for the relief on the position of the isoanomalies on the map, for different horizontal gradients of the force of gravity, as well as the necessary accuracy with which the heights of gravimetric points must be determined, and also the average elevation of the zone when corrections for their relief are taken into account. The author considers it advantageous to reduce the accuracy with which the heights of the gravimetric points are determined, and to compensate for this by a more precise determination of their coordinates. Bibliography, 8 titles.

USSR/Electricity - Communication wires

Card 1/1 Pub. 133 - 8/23

Authors : Efremov, L. A., Chief, and Terenin, V. N., Engineer at the Berislav Communications Center

Title : Splicing bimetallic wires

Periodical : Vest. svyazi 11, page 15, Nov 1954

Abstract : A dependable method of splicing bimetallic wire, frequently used for replacing the old type 3 mm copper wire in communication lines, is proposed. The method consists in extending the ends of the wires to be spliced, somewhat beyond the copper-tube sleeve slipped over the wire ends. The wire ends, which are extended beyond the copper sleeve for a length no less than the diameter of the wires, are then bent back over the connecting sleeve. The wires and sleeve are then twisted through $1\frac{1}{2}$ turns. Tests have proven this method to give highly satisfactory results.

TITLE: Fittings for the Assembly of Corrugated Steel Parts
(Prisposobleniya dlya sborki konstruktsiy iz elementov volnistoy stali)

PERIODICAL: Voenno-inzhenernyy zhurnal, 1958, Nr 7, pp 30-32(USSR)

ABSTRACT: The authors describe the tightening and supporting devices used in tightening parts of steel material used in the construction of shelters. Sergeant D.A. Zaytsev of Moscow Military District proposed a lever of 20-25 mm in diameter, at one end of which are 5 lugs (1 on top and 4 below) with an adjustable hub on top about 10 mm. in diameter intended to catch the edge of the opposing element (a steel plate). This device is shown in a drawing (Figure 1). Similar devices were invented and used by other units (not stated) (Figures 2 and 3). There are 5 sets of diagrams.

TITLE: Some questions involved in the investigation of torsional vibrations of propeller shafting of commercial ships

SOURCE: Ref. zh. Vodnyy transport, Abs. 9A147

REF SOURCE: Sb. Rybolovn. flot. T. 2, L., Sudostroyeniye, 1965, 338-345

TOPIC TAGS: ship component, vibration analysis, propeller blade, fishing ship

ABSTRACT: The "Giprorybflot" Institute (SSSR) has carried out investigations in more than ten ships on the effect of the pitch of an adjustable-pitch screw, on torsional oscillations. When the blade position varies from zero to its nominal value, the moment of inertia of the screw increases by approximately 10 - 20% as a result of the attached water. This leads to a change in the waveform of the single-node vibrations decreasing the frequency of the free oscillations by 4 - 6% and the first-mass amplitudes and the stresses due to resonant oscillations by 50% and more. The waveform and frequency of the two-node vibrations remain practically unchanged. The forced oscillations increase. The norms of permissible stresses due to torsional oscillations, drafted for transport ships, should be modified for fishing-processing ships, since the latter are operated for longer times with the fishing equipment running at reduced speeds. Norms for the stresses are proposed in fractions of the fatigue limit of the material of the shaft during torsion. Recommendations are made on the design of pro-

TITLE: Experience with the TNB-2 unit

SOURCE: Maslozhirovaya promyshlennost', no. 7, 1965, 43

TOPIC TAGS: soap^u production, chemical equipment

ABSTRACT: At the Leningradskiy kombinat sinteticheskikh moyushchykh sredstv, mya i zhelatina imeni Karpova (Leningrad Combine of Synthetic Wetting Agents, Soap, and Gelatin), a TNB-2 soap-boiling unit was put into service at the end of 1961. In the first few months, it has been introduced into its operation. Instead of having a capacity of 100 tons per month, it now produces 150 tons per month. The unit is equipped with and without a steam boiler. The unit is also equipped with a steam boiler. The unit is also equipped with a steam boiler.

TITLE: Method of manufacturing mixed-flow compressor rotors. Class 27, No. 176657

SOURCE: Byulleten' izobreteniy i tovarnykh znakov, no. 23, 1965, 39-40

TOPIC TAGS: compressor rotor, compressor blade, gas turbine

ABSTRACT: An Author Certificate has been issued for a method of making compressor rotors for low-power gas turbine units by casting. In this process the metal is poured into a special mold with pre-positioned press-forged blades. The mold is a metal shell with openings for fitting the blades and it becomes a part of the rotor. To improve the aerodynamic characteristics of the blade passages, the blade roots are

AUTHOR: Yefremov, M.I.

TITLE: Theory of invariance of inertial systems designed
by the analytical method

PERIODICAL: Izvestiya vyschikh uchebnykh zavedeniy, Priborostroy-
eniye, v. 5, no. 6, 1962, 77-84

TEXT: The author considers inertial systems in which the
position is determined by integration of the velocity or by double
integration of the acceleration of the object. Invariance of such
systems with respect to horizontal accelerations of the controlled
object and arbitrary deviations of the stabilizing gyroscope are in-
vestigated. Formulas for analytical errors, which take into account
the time constant of the platform stabilizing circuit, are derived.
The inertia of the circuit, stabilizing the vertical, results in
that the invariance of the inertial system with respect to the hori-
zontal acceleration is only partial. If the analytical and real
radii of curvature do not coincide, the error contains a term which

✓B

Card 1/2

Theory of invariance ...

S/146/62/005/006/004/006
D201/D308

depends on the analytical coordinate itself. The system may be made invariant with respect to the deviation of the stabilizing gyroscope by applying a sidercal correction in the form of a specially shaped signal to the input of the first integrator, the velocity and acceleration analytical errors being unequal. The correction signal makes it possible to avoid cumulative errors, but does not result in the invariance of these errors with respect to the gyroscope deviations. The analysis applies to terrestrial inertial navigation systems, assuming that its sensing elements are placed in two planes perpendicular to each other, and that these elements are symmetrical and do not affect each other. There are 3 figures. ✓B

PERIODICAL:

Fizika v Shkole, 1958, # 1, pp 56-57 (USSR)

ABSTRACT:

As a source of high voltage is needed to demonstrate to the pupils a Geiger-Myuller counter, the author suggests the use of a battery of 3 capacitors; to use them in parallel when charging from a kenotron rectifier or from a dry battery, and in series, when discharging into the counter's tube. The author explains in detail the working of these circuits and illustrates them by drawings.
